

FPOWS

Field Protection Operations Web System

Project Summary — Prepared for Management

Bryan Morales · REDMEN Fire Protection · May 2026 · LIVE: redmen.simprosuite.com

The Problem It Solves

Before FPOWS, technicians and admin staff had to manually look up job details in simPRO, copy information by hand, and send call sheet emails one by one. It was slow, repetitive, and easy to make mistakes. FPOWS eliminates all of that by automating the entire workflow.

What FPOWS Does (in plain English)

Think of FPOWS as a smart dashboard for REDMEN's fire protection jobs that sits on top of simPRO and does the routine work automatically.

What it does	What it means for the business	Benefit
Shows today's jobs instantly	No need to log into simPRO directly	Saves time every morning
Sends call sheet emails automatically	One click — email goes to client	No manual emails
Updates next-service dates in simPRO	Asset records stay accurate after every job	No forgotten updates
Sends a daily 6am manager report	Management gets a summary without asking	Better visibility
Flags overdue customers (30+ days)	Overdue work is highlighted automatically	Nothing falls through
Tracks who is viewing each job, live	Managers see who is working on what	Real-time awareness

How It Was Built

7	51	64	14
Delivery Phases	Git Commits	Days in Dev	API Endpoints

- Built entirely by Bryan Morales, starting 17 March 2026
- Reached production-stable status within the first 2 weeks
- Hosted on Google Cloud — always online, no server to maintain in-house
- Connects directly to your existing simPRO account — no duplicate data entry

Current Status — v1.4.0 (Live Production - redmen.simprosuite.com)

Web Dashboard

- Job viewer showing today's schedule pulled live from simPRO
- Smart customer search with priority tagging and overdue flags
- Full job history per customer — last 30 jobs, stage-sorted
- Live presence tracking — shows who is currently viewing each job in real time

Email & Reporting

- Automated call sheet emails sent to clients with company logo
- Full email history log showing who was contacted and when
- Daily portfolio report delivered at 6:00am every morning (automated via Cloud Scheduler)
- Bi-weekly master activity summary sent to management every two weeks

simPRO Integration (Live — redmen.simprosuite.com)

- Connected directly to live simPRO — NOT the UAT/test environment
- Reads jobs, customers, sites, assets, and schedules from simPRO in real time
- AFSS Due date read from site Public Notes in simPRO — shows actual date, not a calculation
- If no AFSS date in site notes !' shows "No AFSS Due" instead of a misleading calculated value
- 6-Monthly and 12-Monthly service dates read from Customer Assets — shows "—" if no record found
- Writes asset service date updates back to simPRO automatically after each job
- Optimised asset sync — throttled batch fetching to avoid API rate limits

Security

- Protected from unauthorised access (API key + rate limiting + HTTPS)
- All credentials stored securely in environment variables — not in the code
- Security hardened May 2026 — headers, proxy trust, and input validation tightened

What's Coming Next

Priority	Feature	Why it Matters
Short term	Persistent email history storage	Logs currently reset on server restart — move to file/DB
Medium term	GoFormz integration	Auto-fill inspection forms from simPRO data
Medium term	Mobile-friendly version	Technicians can use it on phones in the field
Medium term	Individual user logins	Currently one shared password — proper logins coming
Long term	Analytics dashboard	Visualise call sheet volume and overdue trends

App Screenshots

The following screenshots show the live FPOWS system running in production.

Dashboard — Today's jobs loaded from simPRO

Used by technicians and admin to view the Fire Protection Outstanding Works Status call sheet for any job — pulling live client, site, and service date data directly from simPRO without manual lookup.

simPRO DATA SOURCE

- › Jobs page (redmen.simprosuite.com/staff/jobs/{ID}) !' fields: Name, Stage, DateIssued, Customer.CompanyName, Site.Name, Description, Notes
- › Sites page (redmen.simprosuite.com/staff/locations.php) !' fields: Address, Zone.Name, PrimaryContact (name, phone, email)
- › Customers page (redmen.simprosuite.com/staff/customers.php) !' fields: CompanyName, Tags[].Name, Email, Phone
- › Customer Assets (redmen.simprosuite.com/staff/customers/{ID}/assets/) !' fields: AssetType.Name, ServiceLevels (6mo & 12mo next due dates)
- › Jobs filtered by Site !' last 30 jobs at the same site — fields: ID, Name, Stage, DateIssued

simPRO Online
Automatic simPRO Asset Sync: Active

Hello!
Select a job from the list above to get real-time insights and data checks.

Agent version 1.2.1 - Connected to Company 1

Customer Search — Smart search with overdue flags

Used to search across all customers in simPRO by name. Highlights priority clients (& Major) and flags anyone overdue for contact (30+ days), so nothing falls through the cracks.

simPRO DATA SOURCE

- › Jobs page (Stage=Pending & Stage=Progress, pageSize=250) ! builds the full customer search list on load
- › Customers page (redmen.simprosuite.com/staff/customers.php) ! fields: CompanyName, Tags[].Name (& Major flag), Address
- › Sites page (redmen.simprosuite.com/staff/locations.php) ! used as fallback — fields: Name, Address, PrimaryContact

Above: actual simPRO screen — this is where FPOWS reads the data shown in your call sheets.

Where FPOWS Gets Its Data — Inside simPRO

Everything FPOWS displays is pulled live from this screen in simPRO. Your team never has to log into simPRO manually — FPOWS reads it automatically and presents only what's needed.

- A** Schedule / Current Activity — FPOWS reads this list to show today's jobs and technician assignments
- B** Job Number & Name (e.g. 441684) — FPOWS uses this ID to fetch full job details, site, client, and outstanding works
- C** Customer & Site columns — FPOWS pulls customer name, site address, and contact details from here
- D** People ! Customers / Sites (left menu) — FPOWS also queries these sections for customer search, tags (& Major), and asset service dates

The screenshot displays the simPRO live dashboard. On the left is a sidebar with navigation menus: People, Customers, Sites, Suppliers, Contacts, Employees, and Contractors. The main area features a map of Australia with green location pins, a table of current activities, and a sidebar with navigation menus. The table lists jobs with columns for Job Number, Name, Employee, Scheduled, Status, Customer, and Site. The table is titled 'Current Activity' and 'Schedule'.

Job Number	Name	Employee	Scheduled	Status	Customer	Site
441684 - Conduct	Sydney FIA F2F	Ryan Gordon	08:00 to 16:00	Green	Fire Industry Academy	7 Joule Pt Tuggerah

Above: simPRO live dashboard at redmen.simprosuite.com — the source system FPOWS connects to via the simPRO REST API.

Bottom Line

FPOWS is a custom automation tool built in-house that saves REDMEN staff time every single day by eliminating manual lookups, manual emails, and manual data entry — all connecting to the simPRO system already in use.
